compare_survey	<i>Compares survey sheets from two xlsform files</i>
----------------	--

Description

This function imports two XLSForm files and currently conducts a number of checks to compare each of the "survey" sheets

Usage

```
compare_survey(form1, form2, language)
```

Arguments

form1	Filepath of first form as text or referring to object with location.
form2	Filepath of second form as text or referring to object with location.
language	Specify any secondary language of the form. Form can have more than one, but this will only check one at a time. (e.g. "Francais") Entered text must match language specification in the XLSForm columns.

Value

List of data.frames with results of each "check" in tibbles.

Examples

```
## Not run: compare_forms(form1location,form2location,"Francais")
```

tabulate_comparison	<i>Tabulates results from checks output from "compare_survey"</i>
---------------------	---

Description

This function creates flextable formatted tables from objects stored in full_compare list output by compare_survey.

Usage

```
tabulate_comparison(item)
```

Arguments

item	Number of check to tabulate.
------	------------------------------

Value

Flextable object.

Examples

```
## Not run: tabulate_comparison(1)
```
